

Roadbook Step 2

Read-only api

1. Make a contract with the dependency
 1. Explore the endpoint with a unit test
 2. Use the json response to create infrastructure types
 3. Write a contract test that uses the desired port
 4. Unit test the mapping (infra -> domain) with pure unit tests
2. Write simulator

Anti corruption layer

Domain side

Infrastructure side

```
{
  "races": [
    {
      "raceId": 899354,
      "timestamp": 1716993076905,
      "snails": [
        {
          "number": 14,
          "name": "Affirmed",
          "duration": 504.289
        },
        {"name": "Black Caviar"...},
        {"name": "Gordon"...},
        {
          "number": 19,
          "name": "Winx",
          "duration": 341.148
        }
      ]
    }
  ]
}
```
