

Versions retro-compatibles

Règle d'or

- La version $n+1$ de la base de données doit être retro-compatible avec la version n de l'application

Versions retro-compatibles

Règle d'or

- La version $n+1$ de la base de données doit être retro-compatible avec la version n de l'application

Example: remote file system (OneDrive)

- Very slow, in particular for listing nested folders
- There were around 15 methods on it
- Having the fake made it very easy to implement a good caching system
- As a result it was easy to implement both a persistent and an ephemeral caching system
