

Hands-on setup

Setup steps

1. Open the project file of your chosen language
2. Follow README instruction :
 1. Start mongo db locally
`docker run --rm -p 27017:27017 --name mongo_contract_testing -d mongo`
 2. Start race server locally
`docker run --rm -d -p8000:8000 --name snail-race-server mathieucans/snail-race-server:latest`
 3. Execute requirement test

If you are done : help others! 🤝

Road-book Step 1

Establish a contract with simulator against a DB

- Write a test against a database
- Extract the contract test
- Use contract test to write a simulator
